

## JULY 2016

A recent report shows that most of the waste sent to Iowa's landfills by households like ours could have been either recycled or composted. This includes:

- All the paper could have been recycled
- Most of the plastic could have been recycled
- All of the glass could have been recycled
- All of the organic material could have been composted

In all, 69% of what we threw into the trash cans in Iowa could have been either recycled or composted. So, now what can YOU do? Stop by one of our two Green Team Kiosks at the Resurrection Festival. We'll show you how easy it is to recycle or compost at YOUR home, plus we'll help you put that sandwich wrapper in the correct bin. Just look for the people in the bright green shirts who will be happy to discuss how you can be a better environmental steward.
